

SARITHA BONTHU

Software Engineer | Data Platform Engineer

Email: bonthusaritha09@gmail.com • phone: +1 (937) 285-0222 • LinkedIn: linkedin.com/in/Saritha-Bonthu •

Location: United States

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 4+ years of experience building scalable backend systems, data pipelines, and cloud-native applications. Specialized in event-driven architecture, data transformation, and distributed systems using Python, Java, and AWS. Proven track record of optimizing system performance and delivering high-quality, data-platform solutions in Agile environments. Seeking to leverage expertise in backend engineering and ETL/data pipeline development to drive impactful outcomes as a Data Platform Engineer.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, JavaScript, C, C++
- **Backend and APIs:** REST APIs, Microservices, Event-Driven Architecture, Asynchronous Processing
- **Data & Databases:** SQL, MySQL, MongoDB (NoSQL), Data Transformation & Schema Mapping, ETL/Data Pipelines
- **Messaging & Streaming:** Messaging Systems: NATS, Kafka, RabbitMQ, Message Queues, Event-Driven Architecture
- **Cloud & DevOps:** AWS, Google Cloud, CI/CD Pipelines, Docker, GitHub
- **Observability & Monitoring:** using Datadog for monitoring and observability
- **Frontend & Mobile:** ReactJS, React Native, Flutter, HTML, CSS, Bootstrap, TypeScript
- **Other:** Agile/Scrum, Code Reviews, TensorFlow, VS Code

PROFESSIONAL EXPERIENCE

Capgemini

Software Engineer | Cincinnati, OH, USA | Dec 2024 - Nov 2025

- Accomplished processing of 500K+ daily transactions with 99.9% uptime by designing scalable event-driven architecture and backend microservices using Python and Java, enabling reliable real-time service communication.
- Accomplished 60% reduction in system latency by building and optimizing cloud-native REST APIs on AWS, leveraging asynchronous processing and efficient data handling patterns across distributed services.
- Accomplished high-quality data consistency across distributed systems by implementing end-to-end data pipelines with complex data transformation and schema mapping, ensuring normalized, reliable data flows.
- Accomplished improved system scalability and fault tolerance by integrating messaging systems using event-driven communication patterns aligned with NATS/Kafka architectures to decouple services and enable real-time data processing.
- Accomplished 30% improvement in data retrieval performance by optimizing queries and managing both relational databases MySQL, NoSQL systems and MongoDB for structured and semi-structured data at scale.
- Accomplished 65% reduction in production issues by leading code reviews, implementing CI/CD pipelines, and establishing system observability and monitoring practices using Datadog-like tooling.
- Accomplished 45% improvement in user engagement by implementing AI-powered features using Python and TensorFlow integrated within the backend data processing workflows.

Tata Consultancy Services

Software Developer | India | Oct 2020 - Mar 2023

- Accomplished 30% improvement in application performance by developing scalable web and mobile applications using Python and JavaScript with optimized backend logic and efficient data processing workflows.
- Accomplished enhanced system integration and reliability by building and consuming REST APIs, enabling seamless data exchange and event-driven data flow across multiple integrated services.
- Accomplished 25% faster data retrieval times by designing optimized SQL queries and implementing efficient data transformation and normalization techniques across relational database systems.
- Accomplished streamlined cross-system communication by contributing to messaging-based integrations and event-driven data pipeline patterns to improve scalability and service decoupling.

- Accomplished 35% increase in development efficiency by automating workflows using Python scripts and supporting ETL-style data pipeline processes for recurring data loads and transformations.
- Accomplished on-time delivery of high-quality releases by collaborating with cross-functional Agile teams, maintaining data quality and consistency across all application touchpoints.

PERSONAL PROJECTS

Data Acquisition and Ethical Considerations | 2024

- Accomplished accurate, reliable data collection across 100+ datasets by building automated data pipelines using Python and APIs, applying data transformation and normalization at ingestion.
- Accomplished 30% reduction in compliance risks by implementing secure data pipelines with ethical data handling standards, including privacy protection and informed consent frameworks.
- Accomplished 40% increase in project efficiency by engineering automated ETL-style workflows for ethical data acquisition, processing, and analysis using Python scripts.

E-Commerce Centralized Database Architecture | 2025

- Accomplished 35% reduction in data duplication by designing a centralized relational database system with ER diagrams, SQL, schema mapping, and table normalization across multiple e-commerce departments.
- Accomplished 25% increase in operational efficiency by enabling real-time, scalable data retrieval for cross-departmental teams using optimized SQL and Python-based data pipeline synchronization.
- Accomplished robust data security by implementing role-based access controls and secure data models, protecting sensitive business data across web and mobile application layers.

EDUCATION

Master of Science in Data Science

Lindsey Wilson College | Nashville, Tennessee, USA | June 2024 - August 2025
